### Job Description

The Manager will be responsible for delivering and managing on-going risk engagements, while also contributing to new order intake and business development, for US power utilities, end users, energy marketing and trading companies and other market participants.

### Responsibilities

- Provide a range of risk management consulting services to power/energy clients for all operating and market facing operations for generation, transmission and distribution assets and systems.
- Provide risk program assessment, design and development services to help clients meet their business objectives.
- Develop staffing plans for short, mid and long term risk projects.
- Create project budgets and margins, and manage engagements within these parameters.
- Manage project teams of senior consultants, consultants and analysts.
- Simulate recommended risk management strategies with rigor in both stochastic and deterministic frameworks; bring a best practice perspective to clients' risk management programs.
- Contribute to the growth strategy for the Risk Practice. This includes the evolution of offerings to keep them best in class
